March 23, 2010. 14:40~16:10

Meiji Univ. Ikuta campus A207

Evolution of tourism in spirits-dancing (yokagura) festivals of Takachiho-cho, Miyazaki prefecture

Shiro Horiuchi
(Meiji University)

Abstract:

Many mountainous areas have been under ageing and depopulation. In order to keep infrastructures and job opportunities, some mountainous areas have tried to invite tourists to their traditional festivals. However, mass tourism, or capitalism, likely damages traditional festivals. There is a dilemma between tourism (capitalism) and traditionalism. I did fieldwork study for spirits-dancing (yokagura) in Takachiho-cho, Miyazaki prefecture. I surveyed 19 areas of their dancing places. I also participated in 11 festivals and gained the data. The results were as follows. 19 areas could be divided into 'festivals for tourists' and 'festivals for repeaters and local residents' depending on their locations. The data of 11 festivals clearly showed significant differences between the two types. These suggest that mountainous people arranged their festivals into multi-layers. They thus can pursue tourism and traditionalism at the same time.

参加自由です。皆様のお越しをお待ちしております。
